Cialis improves erection and helps to achieve a successful sexual intercourse. The treatment for erectile dysfunction (ED) was revolutionized with the development of phosphodiesterase type 5 (PDE5) inhibitors. Tadalafil (Cialis®; Eli Lilly and Company, Indianapolis, IN, USA) is the newest and most versatile PDE5 inhibitor in the clinical armamentarium for the treatment of ED. Its most unique characteristic is its long half-life of 17.5 hours, which lends itself to a longer therapeutic window with on-demand dosing and effective steady-state plasma concentrations with once-daily dosing. Clinical trials have proven its safety and efficacy with both dosing strategies for all severities and etiologies of ED, including difficult-to-treat ED. This thorough review will discuss ED, the physiology of penile erection and the role of PDE5, and all aspects of tadalafil, from its development, through its pharmacology, to its latest clinical studies and indications.

Erectile dysfunction treatments About Erectile Dysfunction

Cialis Extra Dosage is indicated for the treatment of erectile dysfunction. Cialis Extra Dosage works faster than other ED drugs and lasts for an extended period of time. Cialis Extra Dosage has an increased dosage to achieve better results. Active Ingredient: Tadalafil Viagra Professional is an extra-strength prescription medicine. It starts acting faster and the effect lasts longer that with regular Viagra. Active Ingredient: Sildenafil Cialis Professional is essentially a "new and improved" formula of the original Cialis®. While the product has been reformulated and enhanced in its chemical compound, it still treats erectile dysfunction in men much like the first tadalafil tablet, yet reaches a larger majority with its efficacy. Active Ingredient: Tadalafil

ERECTILE DYSFUNCTION [Erectile dysfunction \(ED\)](#) is the inability to get or keep an erection firm enough to have sexual intercourse. It's also sometimes referred to as impotence. Occasional ED isn't uncommon. Many men experience it during times of stress. Frequent ED can be a sign of health

problems that need treatment. It can also be a sign of emotional or relationship difficulties that may need to be addressed by a professional. View all

An erection is the result of increased blood flow into your penis. **Blood** flow is usually stimulated by either sexual thoughts or direct contact with your penis. When a man becomes sexually excited, muscles in their penis relax. This relaxation allows for increased blood flow through the penile arteries. This blood fills two chambers inside the penis called the corpora cavernosa. As the chambers fill with blood, the penis grows rigid. Erection ends when the muscles contract and the accumulated blood can flow out through the penile veins. Brand Viagra is often the first treatment tried for erectile dysfunction in men and pulmonary arterial hypertension. Active Ingredient: Sildenafil ED can occur because of problems at any stage of the erection process. For example, the penile arteries may be too damaged to open properly and allow blood in.

Erectile dysfunction (impotence)

Erection problems (impotence) are very common, particularly in men over 40. It's usually nothing to worry about, but you should see a GP if it keeps happening.
